ABOUT ME

I am a passionate web developer with great organizational skills. My main goal is to exceed expectations and achieve exceptional results. I constantly improve my skills and stay updated on the latest advancements in web development to ensure that I am at the forefront of the industry.

MAIN PROJECTS

COOKMEAL APP | 05-2023

This application uses AI to create personalized recipes . Built with the MERN stack (MongoDB, Express, React, and Node .js), it provides a complete and efficient web experience with a flexible database , a robust API, and a dynamic user interface. This is a collaborative project, and each team member was essential . The integration of the OpenAI API in CookMeal offers users a wide range of culinary options tailored to their tastes and preferences . Enhancing the culinary experience through innovative technology.

VERBIFY APP | 04-2023

The development of Verbify was an exciting collaborative project where we used the MERN stack along with TypeScript , React Query , and Next .js to create a robust and efficient application. Our main goal was to overcome the language barrier in the workplace , specifically in English . Verbify offers interactive lessons , grammar exercises , vocabulary tests , and the opportunity to practice English conversations . Working with colleagues from different disciplines was a rewarding challenge, and I am proud of the impact Verbify has had in improving English skills and , therefore , opening up better job opportunities.

ECOMMERCE APP | 02-2023

I developed a complete and functional e-commerce platform. I focused on providing an exceptional experince through product navigation, shopping cart management, ordering , and user profiles . I implemented a route protection system that requires user authentication to access specific sections, guaranteeing data security. I took advantage of the capabilities of React , Vite, and Redux , which allowed me to work efficiently and create an intuitive and secure platform . The end result was an application that effectively balanced data management with user experience.

POKEDEX APP | 12-2022

In the development of this application , I used technologies such as React.js, Vite.js, React Router, Axios, UseForm , UseNavigate , CSS , and Redux Toolkit . I leveraged the Pokémon API to fetch the necessary data. I achieved a smooth and responsive user interface , providing a pleasant experience for the users . I utilized React Router to manage routes and navigation , while Axios handled requests to the Pokémon API to retrieve relevant information . Additionally , I incorporated Redux Toolkit to manage global state in an organized and scalable manner , efficiently centralizing and sharing information between components . It was an exciting challenge to work with these technologies and tools.

WORK EXPERIENCIE

NOCOUNTRY TECH   03-2023 | Today
Ful Stack Web Developer

In Nocountry , I currently hold the position of Full-Stack Developer in the web application development team for the fintech industry . In this role, I have worked with the MERN , PERN , XAMPP technology stack to create high - quality web solutions.

My main responsibilities include participating in the design and full development of web applications, both on the backend and frontend . I closely collaborate with multidisciplinary teams to understand project requirements and create innovative and efficient solutions ..
