ABOUT ME

I am a web developer with experience in auditing and logistics processes . I am currently making a successful transition into the world of information technology (IT) and looking to further my career as a web developer . My motivation lies in acquiring new skills and achieving significant results in this ever -evolving industry . My true passion has always been the world of IT. I am excited to have the opportunity to pursue my calling as a web developer and contribute to the success of your company in this field.

MAIN PROJECTS

COOKMEAL APP | 05-2023

An exciting collaborative app that uses AI to create custom recipes . Built on the MERN stack (MongoDB , Express , React , and Node .js), it provides a complete and efficient web experience with a flexible database , robust API, and dynamic user interface . The collaboration of the team was essential , taking advantage of the skills and knowledge of each member . The Open AI Api integration in CookMeal offers users a wide range of culinary options tailored to their tastes and preferences . Improving the culinary experience through innovative technology and human collaboration.

VERBIFY APP | 04-2023

The development of Verbify was an exciting collaborative project in which we used the MERN stack , along with TypeScript , React Query , and Next.js, to create a robust and efficient application . Our main objective was to overcome the language barrier in the work environment, specifically in English . Verbify offers interactive lessons , grammar exercises, vocabulary tests, and the opportunity to practice English conversations .Working with colleagues from various disciplines was a rewarding challenge and I am proud of the impact Verbify has had in improving English skills and thus opening up better job opportunities.

ECOMMERCE APP | 02-2023

I developed a complete and functional e-commerce platform . I focused on providing an exceptional experience through product navigation , shopping cart management, ordering and user profiles. I implemented a route protection system that required user authentication to access specific sections , guaranteeing data security . I took advantage of the capabilities of React , Vite and Redux , which allowed me to work efficiently and create an intuitive and secure platform . The end result was an application that effectively balanced data management with user experience.

POKEDEX APP | 12-2022

In developing this app, I used technologies like React.js, Vite.js, React Router, Axios, UseForm, UseNavigate, CSS3, and Redux Toolkit. I took advantage of the Pokemon API to get the necessary data. It achieved a smooth and responsive user interface, providing a pleasant experience for users. I used React Router to manage routing and navigation, while with Axios I made requests to the Pokemon API to get the relevant information. Also, I incorporated Redux Toolkit to manage global state in an organized and scalable way, centralizing and sharing information efficiently between components. It was an exciting challenge to work with these technologies and tools.

WORK EXPERIENCIE

NOCOUNTRY TECH   03-2023 | Today
Ful Stack Web Developer

At Nocountry, I currently occupy the role of Full Stack Developer in the web application development team for the fintech industry. In this position, I have worked with the MERN technology stack (MongoDB, Express, React and Node.js) to create high quality web solutions.

My main responsibilities include participating in the complete design and development of web applications, both in the backend and in the frontend. I collaborate closely with multidisciplinary teams to understand project requirements and create innovative and efficient solutions.
